This report was not issued for 1972, data on many products, however, is available in Table 8 of the individual industry reports on the 1972 Census of Manufactures.

Ce bulletin n'a pas paru pour 1972; les chiffres de nombreux produits figurent, cependant, au tableau 8 des publications pour chaque industrie préparées au terme du recensement des manufactures de 1972.

INTRODUCTION

Format

Regular users of this report will be aware of the change, in the 1971 issue, from the arrangement of product names in the former essentially alphabetical sequence to that of the Industrial Commodity Classification¹ (ICC) code sequence. As one of the derivatives of the Standard Commodity Classification, this means that the ICC product sequence approximates that in the reports, *Exports by Commodity* (Catalogue 65-004) and *Imports by Commodity* (Catalogue 65-006). Although this arrangement has some disadvantages in one's ability to locate data on individual products quickly, it has the distinct advantages of grouping related products and of facilitating the use of these data in conjunction with those on imports and exports.

In order to enable readers to locate more quickly products in which they are interested, a list of product names corresponding to the three-digit codes of the ICC, arranged in alphabetical order, has been included in this issue for the first time. It will be found immediately following this "Introduction".

Sources of Data

Commodity data published in this report are derived from returns of establishments surveyed in the Annual Census of Manufactures and from returns of selected establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special commodity questionnaire listing details of products of own manufacture shipped in 1973.

Limitations of Data

Larger manufacturing establishments are asked to report quantity and value of shipments of a specified list of products, most of which are primary to the industry. Although provision is made for reporting the shipments of all other products in total, establishments are asked to provide separate information on any main products in this "all other products" group. Included in this residual category may be products which were specified on the questionnaire sent to the establishment, but which the establishment did not consider of sufficient importance to report separately. Although there is no means of measuring the extent

Présentation des données

Les utilisateurs qui consultent régulièrement cette publication auront sans doute remarqué, dans le numéro de 1971, que les noms des produits ne sont plus classés par ordre alphabétique, comme auparavant, mais selon l'ordre numérique de leur code dans la Classification des produits industriels (C.P.I.)¹. Puisque cette dernière dérive de la Classification type des produits, l'ordre numérique des produits y ressemble à celui que l'on trouve dans *Exportations par marchandises* (n° 65-004 au catalogue) et dans *Importations par marchandises* (n° 65-006 au catalogue). Bien que ce classement présente certains inconvénients (il est plus difficile de trouver rapidement les données sur certains produits), il offre cependant des avantages marqués puisqu'il permet de grouper des produits connexes et facilite la comparaison de ces données et de celles qui portent sur les importations et les exportations.

Pour permettre au lecteur de trouver plus rapidement les produits qui l'intéressent, la publication offre, pour la première fois, une liste alphabétique des noms des produits correspondant aux codes à trois chiffres de la C.P.I. Cette liste suit immédiatement la présente "Introduction".

Sources des données

Les données sur les produits publiées dans ce bulletin proviennent des déclarations des établissements pris en compte au recensement annuel des manufactures et des déclarations de certains établissements classés à d'autres industries, comme la construction et le commerce de gros, qui ne s'occupent pas principalement de fabrication, mais d'une activité manufacturière quelconque. On a demandé à ce dernier groupe d'établissements de remplir une version spéciale du questionnaire, produits décrivant en détail les produits qu'ils ont eux-mêmes fabriqués et livrés en 1973.

Limites des données

Statistique Canada demandait aux grands établissements manufacturiers de déclarer le volume et la valeur des livraisons de produits qui figuraient sur une liste donnée et qui constituaient la production de base de l'industrie. Même si les établissements avaient la possibilité de totaliser leurs livraisons de tous les autres produits, il leur était demandé de donner à part des renseignements sur tout autre produit important déclaré dans la catégorie "tous autres" produits. Cette dernière catégorie peut comprendre des produits qui figuraient sur le questionnaire envoyé à l'établissement, mais que celui-ci n'a pas jugés suffisamment importants pour

¹ Statistics Canada: *Industrial Commodity Classification, Volume 1*, Catalogue 12-541E.

¹ Statistique Canada, *Classification des produits industriels, volume 1*, n° 12-541F au catalogue.

of under-reporting through failure of respondents to enter data opposite the specified product when they could provide such information, there is no reason to suspect that this is significant.

Probably a more important qualification is the inability of respondents to report information on shipments at the requested level of detail. Reporting or accounting practices may differ from establishment to establishment, leading to the same item being reported at different levels of the ICC hierarchy. For example, one establishment may be able to report "biscuits, soda", whereas another can identify the commodity only in more general terms as "biscuits".

The influence of small establishments, the other main source of under-coverage, will obviously differ considerably on individual products but, in total, their shipments in 1973 were \$1,098 million, accounting for only 1.6% of the total products shipped by the manufacturing industries.

In order to provide quantity data for as many commodities as possible, it has been necessary to impute some quantities through the use of average unit prices derived from a preponderance of the respondents providing data on both quantity and value of a particular commodity.

Confidentiality of Data

Limitations on the amount of detailed data that can be published frequently result from the secrecy provisions of the Statistics Act which prohibit the publication of information which can be related to any individual person, business or organization. In practice, this means that data can not be published for a commodity shipped by fewer than three companies or by three or more if these are dominated by one or two companies.

In order to establish what may be published and to prevent indirect (or residual) disclosure, choices must often be made between the publication or suppression of different levels (of the ICC) of commodity data. Such decisions, necessary to comply with the Statistics Act, are made in such a manner as to permit publication of as much commodity detail as possible.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities of own manufacture shipped by establishments regardless of their industrial classification. Statistics on shipments of specific commodities from a

les indiquer séparément. Nous n'avons aucun moyen de savoir jusqu'à quel point les résultats peuvent être faussés du fait que des répondants possédant les renseignements voulus ont négligé d'inscrire les données correspondant à des produits particuliers. Cependant, nous n'avons pas lieu de croire que la différence soit importante.

Les résultats risquent de souffrir davantage du fait que les répondants n'aient pas pu donner de renseignements assez détaillés sur les livraisons. Les méthodes de déclaration ou de comptabilisation diffèrent d'un établissement à l'autre. Ainsi, un même article peut être déclaré en fonction de catégories plus ou moins générales de la C.P.I.: un établissement peut indiquer "biscuits, soda", alors qu'un autre ne pourra identifier son produit qu'en termes généraux, par exemple, "biscuits".

L'impact des petits établissements (autre grande source de sous-dénombrement) variera considérablement, bien sûr, en fonction des produits particuliers; cependant, en 1973, leurs livraisons ont atteint la valeur totale de \$1,098 millions, soit seulement 1.6 % de la valeur totale des produits livrés par les industries manufacturières.

Afin de pouvoir fournir des données quantitatives sur le plus grand nombre possible de marchandises, nous avons dû en imputer quelques-unes à partir des prix unitaires moyens calculés en fonction des déclarations où les répondants, à propos de marchandises particulières, indiquaient à la fois des quantités et des valeurs.

Confidentialité des données

Le nombre limité de données détaillées pouvant être publiées s'explique fréquemment par la règle de confidentialité énoncée dans la Loi sur la statistique, qui interdit la publication de renseignements pouvant permettre de reconnaître une personne, une entreprise ou un organisme. Les données ne peuvent donc pas être publiées quand elles concernent une marchandise livrée par moins de trois sociétés, ou par plus de trois sociétés dont une ou deux sont dominantes.

Pour établir ce qui peut être publié et prévenir toute divulgation directe (ou par recoupement), on doit souvent choisir entre la publication ou la suppression de différents niveaux (de la C.P.I.) de données sur les produits. Ces décisions, nécessaires si l'on veut se conformer à la Loi sur la statistique doivent quand même permettre de publier le plus grand nombre possible de données sur les produits.

Sources additionnelles de renseignements

Dans la présente publication, les données sur les livraisons groupent les chiffres sur les produits fabriqués et livrés par les établissements eux-mêmes, indépendamment de leur classification industrielle. Les statistiques sur

particular industry are published in an annual report on that industry. Such reports are normally issued well in advance of *Products Shipped by Canadian Manufacturers* as the latter cannot be compiled until commodity data are available from all industries. In addition to showing data on shipments of commodities produced by establishments classified to a particular industry, these reports often include an all-industry table which provides total shipments data for selected commodities regardless of the producing industry.

Much more current data on shipments of selected manufactured products are published in some 130 monthly, quarterly and special annual reports.

Figures published in this report may differ slightly from those shown in the "all-industry" tables of the individual industry reports due to corrections made for errors identified after the relevant industry reports were issued.

les livraisons de certains produits d'une industrie particulière paraissent dans la publication annuelle dont cette industrie fait l'objet. Les publications de ce genre paraissent habituellement bien avant celle sur les *Produits livrés par les fabricants canadiens* puisque, pour compiler cette dernière, il faut attendre d'avoir reçu les données de toutes les industries. En plus de présenter des données sur les livraisons de produits fabriqués par les établissements classés dans une industrie particulière, ces publications renferment souvent un tableau d'ensemble faisant état des données sur les livraisons totales de certains produits, sans tenir compte de l'industrie productrice.

Environ 130 publications mensuelles, trimestrielles ou spéciales annuelles fournissent des données beaucoup plus actuelles sur les livraisons de certains produits manufacturés.

Les chiffres contenus dans la présente publication peuvent différer légèrement de ceux qui figurent dans les tableaux d'ensemble des publications consacrées aux industries particulières; cette différence découle de la correction d'erreurs décelées après la parution des publications en question.

INTRODUCTION

Format

Regular users of this report will be aware of the change, in the 1971 issue, from the arrangement of product names in the former essentially alphabetical sequence to that of the Industrial Commodity Classification¹ (ICC) code sequence. As one of the derivatives of the Standard Commodity Classification, this means that the ICC product sequence approximates that in the reports, *Exports by Commodity* (Catalogue 65-004) and *Imports by Commodity* (Catalogue 65-006). Although this arrangement has some disadvantages in one's ability to locate data on individual products quickly, it has the distinct advantages of grouping related products and of facilitating the use of these data in conjunction with those on imports and exports.

In order to enable readers to locate more quickly products in which they are interested, a list of product names corresponding to the three-digit codes of the ICC, arranged in alphabetical order, has been included in this issue for the first time. It will be found immediately following this "Introduction".

Sources of Data

Commodity data published in this report are derived from returns of establishments surveyed in the Annual Census of Manufactures and from returns of selected establishments classified to other industries, such as construction and wholesale trade, whose principal activity is not manufacturing but which nevertheless engage in some manufacturing activity. This latter group of establishments was asked to complete a special commodity questionnaire listing details of products of own manufacture shipped in 1974.

Limitations of Data

Larger manufacturing establishments are asked to report quantity and value of shipments of a specified list of products, most of which are primary to the industry. Although provision is made for reporting the shipments of all other products in total, establishments are asked to provide separate information on any main products in this "all other products" group. Included in this residual category may be products which were specified on the questionnaire sent to the establishment, but which the establishment did not consider of sufficient importance to report separately. Although there is no means of measuring the extent

Présentation des données

Les utilisateurs qui consultent régulièrement cette publication auront sans doute remarqué, dans le numéro de 1971, que les noms des produits ne sont plus classés par ordre alphabétique, comme auparavant, mais selon l'ordre numérique de leur code dans la Classification des produits industriels (C.P.I.)¹. Puisque cette dernière dérive de la Classification type des produits, l'ordre numérique des produits y ressemble à celui que l'on trouve dans *Exportations par marchandises* (n° 65-004 au catalogue) et dans *Importations par marchandises* (n° 65-006 au catalogue). Bien que ce classement présente certains inconvénients (il est plus difficile de trouver rapidement les données sur certains produits), il offre cependant des avantages marqués puisqu'il permet de grouper des produits connexes et facilite la comparaison de ces données et de celles qui portent sur les importations et les exportations.

Pour permettre au lecteur de trouver plus rapidement les produits qui l'intéressent, la publication offre, pour la première fois, une liste alphabétique des noms des produits correspondant aux codes à trois chiffres de la C.P.I. Cette liste suit immédiatement la présente "Introduction".

Sources des données

Les données sur les produits publiées dans ce bulletin proviennent des déclarations des établissements pris en compte au recensement annuel des manufactures et des déclarations de certains établissements classés à d'autres industries, comme la construction et le commerce de gros, qui ne s'occupent pas principalement de fabrication, mais d'une activité manufacturière quelconque. On a demandé à ce dernier groupe d'établissements de remplir une version spéciale du questionnaire, produits décrivant en détail les produits qu'ils ont eux-mêmes fabriqués et livrés en 1974.

Limites des données

Statistique Canada demandait aux grands établissements manufacturiers de déclarer le volume et la valeur des livraisons de produits qui figuraient sur une liste donnée et qui constituaient la production de base de l'industrie. Même si les établissements avaient la possibilité de totaliser leurs livraisons de tous les autres produits, il leur était demandé de donner à part des renseignements sur tout autre produit important déclaré dans la catégorie "tous autres" produits. Cette dernière catégorie peut comprendre des produits qui figuraient sur le questionnaire envoyé à l'établissement, mais que celui-ci n'a pas jugés suffisamment importants pour

of under-reporting through failure of respondents to enter data opposite the specified product when they could provide such information, there is no reason to suspect that this is significant.

Probably a more important qualification is the inability of respondents to report information on shipments at the requested level of detail. Reporting or accounting practices may differ from establishment to establishment, leading to the same item being reported at different levels of the ICC hierarchy. For example, one establishment may be able to report "biscuits, soda", whereas another can identify the commodity only in more general terms as "biscuits".

The influence of small establishments, the other main source of under-coverage, will obviously differ considerably on individual products but, in total, their shipments in 1974 were \$1,329 million, accounting for only 1.6% of the total products shipped by the manufacturing industries.

In order to provide quantity data for as many commodities as possible, it has been necessary to impute some quantities through the use of average unit prices derived from a preponderance of the respondents providing data on both quantity and value of a particular commodity.

Confidentiality of Data

Limitations on the amount of detailed data that can be published frequently result from the secrecy provisions of the Statistics Act which prohibit the publication of information which can be related to any individual person, business or organization. In practice, this means that data can not be published for a commodity shipped by fewer than three companies or by three or more if these are dominated by one or two companies.

In order to establish what may be published and to prevent indirect (or residual) disclosure, choices must often be made between the publication or suppression of different levels (of the ICC) of commodity data. Such decisions, necessary to comply with the Statistics Act, are made in such a manner as to permit publication of as much commodity detail as possible.

Additional Sources of Information

Shipments data in this report consolidate figures for commodities of own manufacture shipped by establishments regardless of their industrial classification. Statistics on shipments of specific commodities from a

les indiquer séparément. Nous n'avons aucun moyen de savoir jusqu'à quel point les résultats peuvent être faussés du fait que des répondants possédant les renseignements voulus ont négligé d'inscrire les données correspondant à des produits particuliers. Cependant, nous n'avons pas lieu de croire que la différence soit importante.

Les résultats risquent de souffrir davantage du fait que les répondants n'aient pas pu donner de renseignements assez détaillés sur les livraisons. Les méthodes de déclaration ou de comptabilisation diffèrent d'un établissement à l'autre. Ainsi, un même article peut être déclaré en fonction de catégories plus ou moins générales de la C.P.I.: un établissement peut indiquer "biscuits, soda", alors qu'un autre ne pourra identifier son produit qu'en termes généraux, par exemple, "biscuits".

L'impact des petits établissements (autre grande source de sous-dénombrement) variera considérablement, bien sûr, en fonction des produits particuliers; cependant, en 1974, leurs livraisons ont atteint la valeur totale du \$1,329 millions, soit seulement 1.6 % de la valeur totale des produits livrés par les industries manufacturières.

Afin de pouvoir fournir des données quantitatives sur le plus grand nombre possible de marchandises, nous avons dû en imputer quelques-unes à partir des prix unitaires moyens calculés en fonction des déclarations où les répondants, à propos de marchandises particulières, indiquaient à la fois des quantités et des valeurs.

Confidentialité des données

Le nombre limité de données détaillées pouvant être publiées s'explique fréquemment par la règle de confidentialité énoncée dans la Loi sur la statistique, qui interdit la publication de renseignements pouvant permettre de reconnaître une personne, une entreprise ou un organisme. Les données ne peuvent donc pas être publiées quand elles concernent une marchandise livrée par moins de trois sociétés, ou par plus de trois sociétés dont une ou deux sont dominantes.

Pour établir ce qui peut être publié et prévenir toute divulgation directe (ou par recoupement), on doit souvent choisir entre la publication ou la suppression de différents niveaux (de la C.P.I.) de données sur les produits. Ces décisions, nécessaires si l'on veut se conformer à la Loi sur la statistique doivent quand même permettre de publier le plus grand nombre possible de données sur les produits.

Sources additionnelles de renseignements

Dans la présente publication, les données sur les livraisons groupent les chiffres sur les produits fabriqués et livrés par les établissements eux-mêmes, indépendamment de leur classification industrielle. Les statistiques sur

particular industry are published in an annual report on that industry. Such reports are normally issued well in advance of *Products Shipped by Canadian Manufacturers* as the latter cannot be compiled until commodity data are available from all industries. In addition to showing data on shipments of commodities produced by establishments classified to a particular industry, these reports often include an all-industry table which provides total shipments data for selected commodities regardless of the producing industry.

Much more current data on shipments of selected manufactured products are published in some 130 monthly, quarterly and special annual reports.

Figures published in this report may differ slightly from those shown in the "all-industry" tables of the individual industry reports due to corrections made for errors identified after the relevant industry reports were issued.

les livraisons de certains produits d'une industrie particulière paraissent dans la publication annuelle dont cette industrie fait l'objet. Les publications de ce genre paraissent habituellement bien avant celle sur les *Produits livrés par les fabricants canadiens* puisque, pour compiler cette dernière, il faut attendre d'avoir reçu les données de toutes les industries. En plus de présenter des données sur les livraisons de produits fabriqués par les établissements classés dans une industrie particulière, ces publications renferment souvent un tableau d'ensemble faisant état des données sur les livraisons totales de certains produits, sans tenir compte de l'industrie productrice.

Environ 130 publications mensuelles, trimestrielles ou spéciales annuelles fournissent des données beaucoup plus actuelles sur les livraisons de certains produits manufacturés.

Les chiffres contenus dans la présente publication peuvent différer légèrement de ceux qui figurent dans les tableaux d'ensemble des publications consacrées aux industries particulières; cette différence découle de la correction d'erreurs décelées après la parution des publications en question.
